

HIV | HEPATITIS

I WANT
TO MAKE TESTS

HIV AND HEPATITIS ARE SEXUALLY TRANSMITTED DISEASES

The only way to know is to make a blood test in screening center or hospitals.

HEPATITIS

Hepatitis are sickness that attack your liver. The main ways to catch hepatitis are:

- * sex without condom,
- * injections for drugs,
- * sharing toothbrush,
- * razorblades,
- * nail clippers,
- * hair needles
- * and tweezers.

HIV / AIDS

HIV / AIDS is sickness which destroy the immune system and the body can not protect itself from others infections. It can be transmitted by blood, sperm, vaginal discharges and breast milk.

IN CIDAG,

the process is totally free (and anonymous) even if you have no hospital paper.

You will have the results a few days later. The doctor must explain the results and tell you if you need to receive a treatment or not.

If someone asks you to sign something, do not sign if you don't agree or if you don't understand.

If your test is negative, you should do the injection for hepatitis B.

POSSIBILITÉ DE RÉDUIRE LÉGEREMENT LE TEXTE ?

FOR HEPATITIS SCREENING TEST

You need a medical prescription. It's no use for an HIV test. Screening for hepatitis B and C is also made in "CIDAG": anonymous and free center for screening and information.

TREATMENTS FOR HEPATITIS DO EXIST,

the sooner you will receive it, the better. Don't stay alone with your questions and fears. If you can't talk to your friends about it, you can talk to doctors, to social workers, and there are also organizations for people who have hepatitis

VOCABULARY →

INJECTION TO PREVENT SICKNESS
→ vaccination

RESULTS
→ résultats

TEST TO CHECK IF YOU CATCH SOME DISEASE
→ test de dépistage

BLOOD TEST
→ prise de sang

TREATMENT, MEDICATION
→ traitement

TREATMENT, MEDICATION
→ traitement
